

Hauptvorträge

R. Ansorge

Convergence of Discretizations in Nonlinear Problems: A General Approach

O.T. Bruhns

On new materia equations of elasto -and plastomechanis

H. Bufler

Konfigurationsabhängige Lasten und nichtlineare Elastomechanik

H.H. Fernholz

Influence and control of turbulent shear flows

H. Irshik

Vibrations of laminated beams and plates

R.N. Iyengar

Chaotic behaviour in nonlinear oscillators

W. Jäger

Diffusion-reaction equation and chemical and biological applications

J. Mawhin

Nonlinear oscilations: one hundred years after Poincare and Liapunov

P.H. Müller

Zum Problem der besten Wahl

F.G. Rammerstorfer

Micro- und macromechanical analysis of compound material and composite buildings

R. Rannacher

On the numerical analysis of the incompressible Navier-Stokes equations

U. Schumann

Large-eddy simultion of turbulent convective boundary layers

H.J. Stetter

Numerical and algorithmic tools for scientific computation

Ludwig-Prandtl- Gedächtnisvorlesung

K. Kirchgässner

Struktur und Dynamik nichtlinearer Oberflächenwellen

öffentlicher Vortrag

W. Nachtigall

Aerodynamik des Vogelfluges
